EXPERIENCE

SAMSUNG

Chief Engineer

Bengaluru, IN

Jun 2025 – Present

- Architecting Samsung's lending platform across India, South-East Asia, and South America — owning end-to-end backend architecture across service decomposition, event streaming topology, and config-driven market onboarding that reduced new market rollout from weeks to days.
- Designed a real-time payment reconciliation engine with exactly-once semantics — eliminated manual reconciliation entirely, reducing settlement turnaround from T+2 to near real-time; built delinquency detection pipelines scoring at-risk accounts in real time and triggering automated collection workflows.

WESTERN UNION

Lead Software Engineer

Pune, IN

Feb 2025 – Jun 2025

- Architected and owned Western Union's real-time fraud detection pipeline (Kafka, Flink, Spark Streaming) processing 100M+ events/day with sub-second latency — shrinking fraud exposure window from minutes to milliseconds by intercepting signals before transaction settlement across a system moving billions of dollars globally.

CISCO

Senior Software Engineer

Bengaluru, IN

October 2023 – November 2024

- Led end-to-end modernization of Cisco's Customer Product Data Platform — a mission-critical system serving 300+ global channel teams across partner entitlements, product hierarchy, and customer data management, handling 100K+ daily API requests.
- Decomposed a legacy monolith into 10+ Spring Boot microservices on AWS ECS and Kubernetes — improved fault isolation, enabled independent scaling, and eliminated deployment dependencies across critical partner and product systems.
- Spearheaded Neo4j to Amazon Neptune migration, re-modeling graph schemas to Gremlin traversal logic — cut infrastructure costs by ~\$150K annually and improved query performance at scale.

CISCO

Software Engineer

Bengaluru, IN

August 2020 – September 2023

- Designed and delivered Cisco's Customer Product Data Platform from the ground up — handling 100K+ daily API requests across partner onboarding, entitlement resolution, and product catalog for Cisco's global channel ecosystem.
- Engineered a Redis graph-caching layer with Cypher and Oracle query optimizations — delivered 3x improvement in API response times for high-traffic partner entitlement endpoints.
- Built a metadata-driven onboarding engine — enabled zero-code configuration of customer hierarchies and entitlement rules, cutting partner time-to-market from weeks to hours.
- Architected Jenkins CI/CD pipelines with automated testing, security scanning, and Kubernetes deployment optimization — reduced release cycles by 70%, enabling weekly production deployments.

EDUCATION

Birla Institute of Technology and Science, Pilani

Master of Engineering Computer Science

Goa, IN

2018 – 2020

Dr. A.P.J. Abdul Kalam Technical University, Lucknow

Bachelor of Technology Computer Science

Lucknow, IN

2013 – 2017

TECHNICAL SKILLS

Languages & Frameworks: Java, Spring Boot

Cloud & Infrastructure: AWS, Docker, Kubernetes, Jenkins, Prometheus, Grafana, ELK Stack

Databases & Messaging: SQL, Neo4j, MongoDB, Kafka, Apache Flink, Apache Spark, Redis, Amazon Neptune
